INFORMATION SOURCES, MEDIA LITERACY AND RUSSIAN PROPAGANDA:

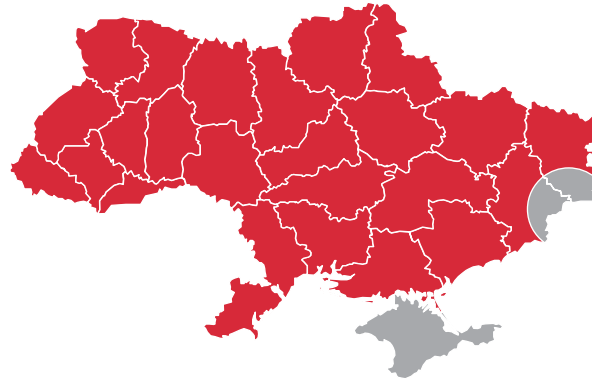

findings of all-Ukrainian
public opinion survey

UNIVARIATE ANALYSIS TABLES

MINISTRY OF FOREIGN AFFAIRS
OF DENMARK
Danida

The survey was held by the Kiev International Institute of Sociology from 1 to 25 of February 2019. The field study was conducted between 9 and 20 February 2019. The survey took place in 110 populated areas (PSU) across all the regions of Ukraine except the Autonomous Republic of Crimea. In Donetsk and Luhansk regions the survey was held only on the territories that are currently controlled by Ukraine. As a result of the field study, 2042 survey forms were collected.

SURVEY METHODOLOGY

The nationwide survey 'Thoughts and Opinions of Ukraine's Population (Omnibus)' was held by the Kyiv International Institute of Sociology in February 2019 on the request of NGO "Detector Media" with the financial support of the Danish Ministry of Foreign Affairs. The survey considered the public opinion of adult residents of Ukraine (18 y.o. and plus). Main stages of survey included the construction of questionnaire and auxiliary tools, sampling, holding interviews with respondents, quality control of performed activities, data input and check for logical errors, preparation of final data package, univariate frequency tables.

For the purposes of the survey, a stratified four-step random sampling was developed, random at each level. The sample is representative of adult population permanently residing in Ukraine, not at the military service and not in prisons or health-care institutions (hospitals, medical residential facility). Initially, the population of Ukraine was stratified by region (24 oblasts and Kyiv), then the population of each region was further stratified to urban (cities and urban-type settlements) and rural population (except for Kyiv where the population is all urban). That is, in general, the population of Ukraine was divided into 49 strata. Each stratum, in proportion to the adult population, had a set number of interviews to be conducted and a set number of settlements where the survey should be conducted.

The stratification was followed by selection of specific locations where interviewers were to work. At the first stage, settlements were selected within each stratum. Urban settlements were selected with a probability proportional to the adult population in a settlement. For the rural population stratum, the districts (rayon) were initially selected (with a probability proportional to the adult rural population in a district), then villages were randomly selected within the already selected district. At the second stage, voting stations were selected within each settlement. At the third stage, at each polling station, the starting address was chosen – street, number of house and, in case of multistory buildings, the number of apartment from which the interviewers started the survey. At the fourth stage, the respondents were selected and surveyed with the modified route sampling method.

The sample is representative for Ukraine as a whole and for 4 macro-regions separately:

- **West:** Volynska, Zakarpatska, Ivano-Frankivska, Lvivska, Rivnenska, Ternopilska, Khmelnytska and Chernivetska oblasts;
- **Center:** Vinnytska, Zhytomyrska, Kirovohradska, Kyivska, Poltavska, Sumska, Chernihivska oblasts and city of Kyiv;
- **South:** Dnipropetrovska, Zaporizska, Mykolaivska, Odeska and Khersonska oblasts;
- **East:** Donetsk, Luhanska and Kharkivska oblasts.

The surveys in Luhanska and Donetsk oblasts were held only on the territories controlled by the Ukrainian government. The survey was not conducted in the Autonomous Republic of Crimea.

The field stage was on 9-20 February 2019. In total, the survey had 2 042 interviews with respondents residing in 110 settlements in Ukraine.

The survey was conducted by means of face-to-face interviews with the use of tablets at the respondents' locations (CAPI).

Statistical error of sampling (with 0.95 probability and 1.5 design effect) is within:

- 3.3% for indicators close to 50%,
- 2.8% for indicators close to 25 or 75%,
- 2.0% for indicators close to 12 or 88%,
- 1.4% for indicators close to 5 or 95%,
- 0.7% for indicators close to 1 or 99%.
